Automatic Dose Optimization for Radiotherapy

Problem Formulation
IMRT

Bixel values:

$$x_{i,j}^{\theta} \geq 0, \text{ for } \theta \in \Theta \text{ and } 1 \leq i,j \leq 20^{1}$$

usually concatenated to a single bixels-value vector x.

Dose calculation:

$\mathbf{y} = L\mathbf{x}$ with L (pre-calculated) dose-influence (DI) matrix

---

[1]20x20 is a typical bixel discretization

Problem Formulation
IMRT (bis)
